

DESIGNING THE ULTIMATE CONFERENCE ROOM WITH NANAWALL OPENING GLASS WALLS

NanaWall®
Engineering the Exceptional

ALL ABOUT DESIGN

Conference rooms have unique design considerations. These considerations may manifest in a need for visual privacy to maintain a sense of discretion, acoustical privacy to protect confidentiality, and aesthetics to ensure appropriate representation of the organization.

The NanaConference Room embodies all of these considerations, and then takes them a step beyond. The NanaConference Room is one that not only maximizes space, but effortlessly reconfigures it – taking full advantage of available square footage and creating space that is endlessly flexible and multifunctional.

MAXIMIZE SQUARE FOOTAGE

The available space in a tenant improvement project is finite and comes at a premium. The ability to transform this space into many rooms on-demand increases the functionality of the space overall, and can allow it to do the job of a space twice as large.

TRANSLUCENT BUT DISCRETE

Maintaining confidentiality and providing a sense of privacy is still achievable in a working environment with attractive, open, collaborative spaces. Find out how NanaWall frameless glass walls with enhanced privacy features helped a Silicon Valley engineering firm do just that.

CUSTOMIZED VISUAL PRIVACY

A 50,000-square-foot new national headquarters comprised of two separate buildings with the option to expand quickly blossomed into a 120,000 square-foot work of art. NanaWall opening glass walls were used to create a visual connection between separate project rooms while ensuring the necessary acoustic isolation for groups collaborating in separate spaces to retain focus.

SOUND SOLUTIONS FOR ACOUSTICAL PRIVACY

The HSW60 system allows this law office to function as multiple conference rooms as well as a client reception area while providing acoustic privacy to each enclosed space. Once opened, this remotely stacked, stowed away system transforms the overall space into a large open area in which community events can be held.

TRANSPARENTLY MULTIFUNCTIONAL

NanaWall products were a natural fit for the reconfigurable space envisioned for this project. The client wanted a highly functional space that reflected their values around transparency, but could still provide a certain amount of acoustic isolation so that employees on either side of the glass could concentrate without auditory disruption.

THINKING BIG (AND SMALL) PICTURE

PrivaSEE, our STC 36 rated frameless opening glass wall system, allows the large spaces in this office to divide on demand into smaller, acoustically isolated rooms, while still retaining a sense of expansiveness.

TRAFFIC FLOW AND SPACE MANAGEMENT

After their office expanded to take over an entire floor, this engineering firm's architect decided to transform the elevator lobby into something far more than just the reception area it had previously been. The conference room located across the lobby from the elevators was renovated with a CSW75 to give the reception area and the conference room a seamless, on-demand connection.

MAXIMAL PANE, MAXIMAL GAIN

High-end conference rooms, including a large boardroom and two smaller conference rooms occupy half of the new floor recently leased by an international financial services company.

To maximize space, one of the conference rooms was renovated with a CERO® by NanaWall, which upon opening, provides an extension to the social space between the two conference rooms. This expanded space can also be used for large meetings, speaker events, and presentations. Cero is able to achieve an overall STC rating of 43 when paired with our new flush sill.
